

DEPARTMENT OF PAIN AND PALLIATIVE MEDICINE

Goals of Care Documentation (Family, Surrogate)

I/we, have been closely involved in the care of my/our
MRD No. We understand that/she is in an advanced stage of along
with multiple organ dysfunctions, wherein the deterioration of physical health has reached a point of
no return despite well-established treatment. I/we are aware that, in the event of sudden life such
as, intubation, resuscitation, ventilation and other artificial life supportive measures, are not beneficial.
They may have a higher potential to cause pain and suffering, without resolving the condition for a
meaningful quality of life.

It is our collective desire / decision that he/she should not be subjected to aggressive critical care
interventions. Instead, we request her/his care to be focused mainly on relieving his/her pain and other
distresses, and in maintaining her/his dignity, comfort, and quality of life.

I / we understand that by signing this document, I am not depriving my of the
essential nursing care, timely clinical evaluation and care, necessary to keep her / him comfortable. I/we
prefer that the specialist palliative care team continue to be involved during this phase.

I/we have been explained all of the above details about her/his condition, in the language that I/we
understand, and am/are aware of the consequences of my decision. I/we also request that the goals of
care expressed in this document reflect my/our highest priorities and that it be respected by
all clinical teams, who are currently involved with her/his care.
